ALTERNATIVE 3: WILDEST

Highlights:
- 227 acres of wetlands* (75 acres by 2100 with 5.5 feet of sea level rise)
- 4,800 feet of trails

Key features:
- Best alternatives for water quality improvements, sea level rise resiliency, habitat for wildlife, and access to nature
- Excavated fill added to open water to create mudflat, saltmarsh, transitional, and upland habitat
- No need for offsite disposal, with fewer impacts to traffic and air quality

*Using the Mission Bay Park Master Plan definition of “wetlands”, meaning salt marsh, transitional, and upland habitats.
Improve Water Quality
## Campland - Mission Bay

**Key**
- **Enterococcus (MPN/100 ml):**
  - (0-35) Low Bacteria
  - (36-104) Medium Bacteria
  - (>104) High Bacteria

*0 means value of <10*
Retake Our Shoreline
Increase Our Resiliency

Key features of "Wildest":
- 227 acres of wetlands* at construction.
- By 2100/5.5 feet of SLR the habitat shrinks to 75 acres.
- This alternative is most resilient to climate change and comes closest to meeting the acreages called for in the Mission Bay Park Master Plan.
